Hybrid Doge

The Next Generation Doge Token

INTRODUCTION

Hybrid Doge is a deflationary DeFi token on Binance Smart Chian. That charges 12% tax on each buy and sell transaction. This tax benefits the project as a whole by adding 5% of each transaction is automatically added to the liquidity pool, 5% of each transaction will be automatically given to the token holder and 2% token sent to the burn address to make that the token price is always increasing and succeed in the long term. Another major purpose of the tax is to prevent large token holders from buying and selling quickly and damaging the price. This almost always affects small token holders and we want a fair token for everyone.

Mission

Our mission is to create the Hybrid Solution for making money on Meme Coin. It is intended to create high priced Doge Coin with very low supply of only 10 Million and 2% of supply burn/decreased on every transaction. So token price will be increasing on every transaction.

Vision

Hybrid Doge believe in the future of blockchain and aims to make the interplay of blockchain more practical by making money on meme coin for all kinds of blockchain interactions.
And We have a vision of creating Hybrid Staking, Hybrid Defi and Hybrid Blockchain in the future.

Pre-Sale and Launch

Our main focus in pre-sale and launch will be create a level playing field for all involved. The minimum trading limit will be 0.05 BNB and the maximum limit will be 5 BNB.
Our pre-sale will be hosted on the DxSale platform with a maximum contribution of 150BNB softcap and 300BNB hardcap. However, we created pre-sale buyers to get more benefit, so we made public list price will be higher than the pre-sale price.

70% of the liquidity from the Pre-Sale will be added to the PancakeSwap liquidity pool and locked for 6 months.
We purposefully did not hold extra-large developer token wallets that could easily manipulate the price or rug pull, so people can trust the project going forward. After the successful launch of PancakeSwap, we will start to rise with Hybrid Doge by building a strong community. That's why the contract is completely decentralized and 100% community driven, with no backdoors or hidden ownership.
 All tokens that were not transferred through DxSale either by PreSale or the liquidity pool will be burned, it will decrease the total supply.
We will consult with multiple audit firms for further assurance on the vulnerabilities of the contract.

Liquidity Pool Algorithm

Part of the core logic of the Hybrid Doge contact is an automatic liquidity pool algorithm.

5% of each buy and sell is accumulated and then added to the Pancakeswap liquidity pool.

One of the core aims is to reduce the price impact when larger wallets decide to sell their tokens at any point in time.

Having this algorithm in place, in theory, helps reduce the large price fluctuations that can be seen in other tokens.

In short, the tokens and BNB added to the liquidity pool creates stability and an increased price floor.

Deflationary

Due to the nature of 5% of each transaction being passed on to Hybrid Doge holders this has the side effect of causing the token to be deflationary. The largest "holder" is a dead wallet where 2% of each transaction will be burned. Since this wallet is not excluded from reflections,

A proportion is added to the burn wallet thus decreasing the circulating supply slowly over time. The tokens in the dead wallet are completely inaccessible and are effectively burned. A benefit to Hybrid Doge holders is that lowering the circulating supply, when demand is high enough, can increase a price of the token over time.
Deflation of the circulating supply happens at a safe rate and in short promotes growth.
